Lab Practical Exam #1

Starting with the relative and comparison expression parser from midterm exam #1, extend the grammar to include the “>” (greater-than) operator, which has the same level of precedence as *greater-than-or-equal* and *less-than-or-equal* operators. Add greater-than to the grammar in LP1Parser.jj, add an Absyn class to represent greater-than expressions, and modify the Interpreter.java class to correctly execute greater-than expressions.

Once you have executed the “`lpstart`” script, run “`make`” to compile your Interpreter, “`java Interpreter testfile`” to execute your Interpreter, and “`make test`” to diff your Interpreter against the expected result. Execute “`lpturnin`” to submit your code.

Submit early and often; no late submissions will be accepted.
